

As a truck driver who travels across this country, I need to be kept abreast of the weather and traffic situations. In my line of work, time is money, and when I cannot count on locating traffic and weather problems, I lose income. As I travel, the local station continually change and I cannot safely change stations or hunt for them as I am driving down the road. XM provides this service where ever I am. I do not need to keep trying to guess where the stations are and never lose service. Since I pay for this priority service I do not see how this affects local broadcasting stations, please reject NAB's petition 04-160. Thank you, Kevin Freel
